

1) First of all, I renamed the website under my name

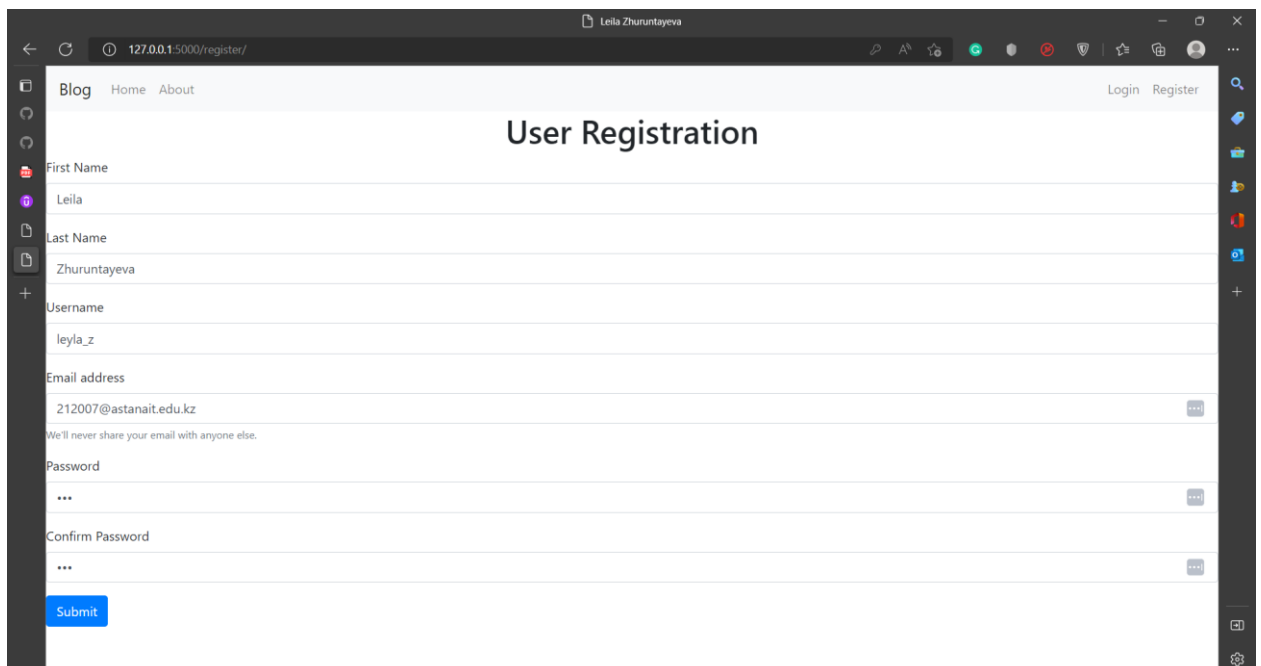

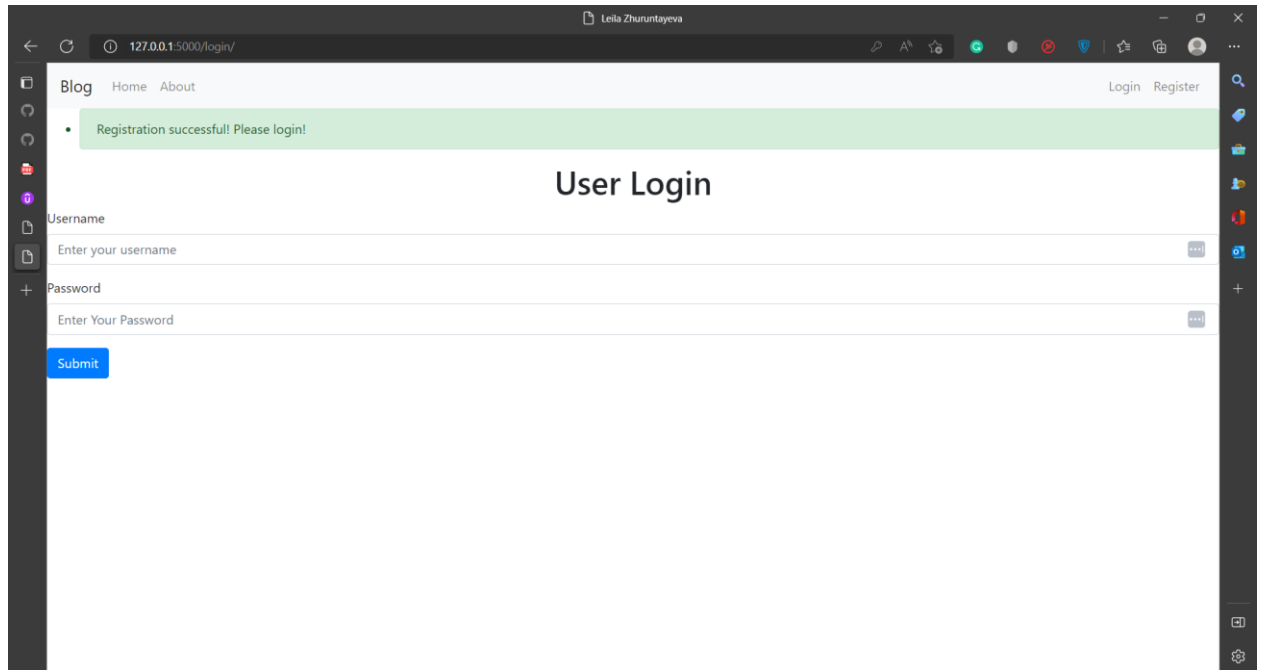

```
{% extends 'bootstrap/base.html' %}
{% block head %}
{{ ckeditor.load() }}
{{ super() }}
{% endblock %}
{% block title %}
Leila Zhuruntayeva
{% endblock %}
{% block navbar %}
{% include '_navbar.html' %}
{% endblock %}
{% block content %}
{% with messages = get_flashed_messages(with_categories=true) %}
{% if messages %}
<ul>
  {% for category, message in messages %}
    <li class="alert alert-{{ category }}">{{ message }}</li>
  {% endfor %}
</ul>
{% endif %}
{% endif %}
```

The changed name can be seen on the top of the screenshot given below:

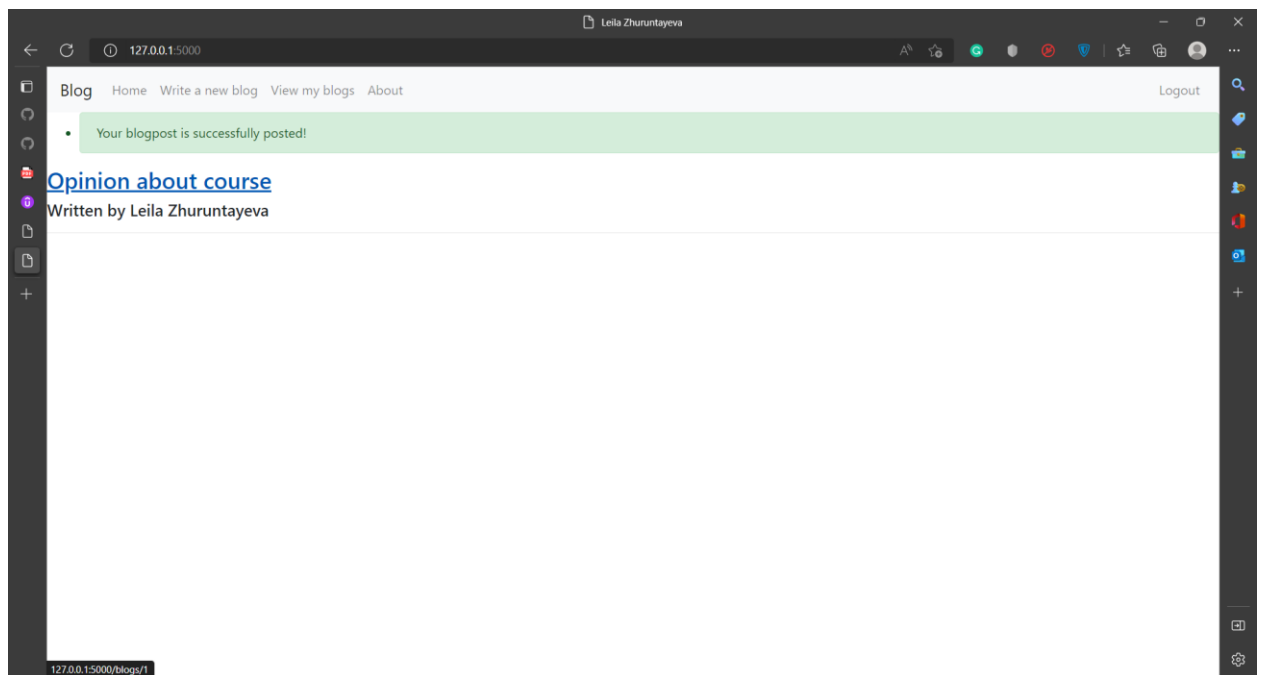

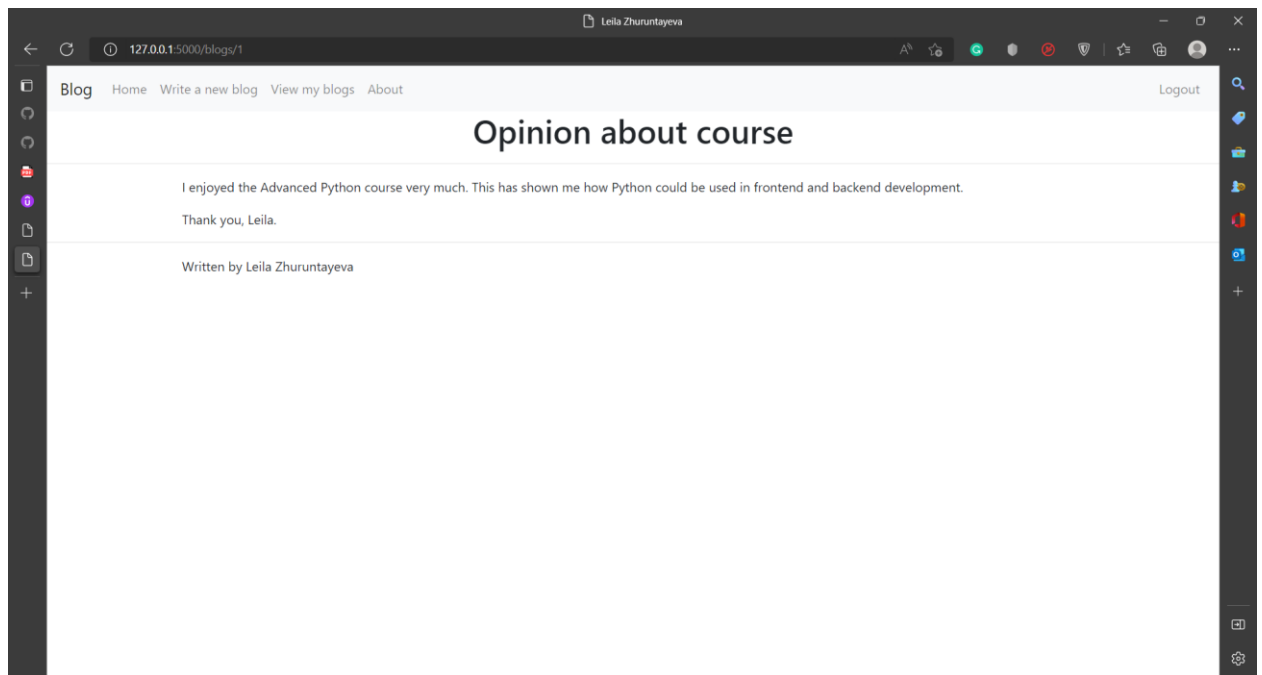

2) Next, I created a user Leila

Then I created a blog with my opinion on the course. It was published and could be seen on the list:

The opinion also appears in the MySQL blog table and user Leila in the user table.
